

ICD 10 Codes to be used for Chart Abstraction for “Get with the Guidelines” Project

Since there is no ACS CMG (case mix group) these codes define/describe the ACS population. These codes are to be used for the following:

- Baseline chart audit of # ACS patients receiving best practice care
- Ongoing abstraction (quarterly) to provide a denominator to determine the compliance rate for the number of patients who received a GAP tool at discharge

| ICD 10 Code | Diagnosis Description |
|-------------|---|
| I20.0 | Any/All Unstable Angina |
| I21 | Any/All Acute Myocardial Infarction |
| I22 | Any/All Subsequent Myocardial Infarction (accompanied by a code from subcategory R94.3) |
| I24 | Coronary thrombosis not resulting in myocardial infarction may also be applicable in those cases where treatment has averted an MI and will be accompanied by a code from R94.3 |
| R94.30 | Electrocardiogram suggestive of ST segment elevation myocardial infarction (STEMI) |
| R94.31 | Abnormal cardiovascular function studies (biomarkers or ECG) suggestive of non ST segment elevation myocardial infarction (NSTEMI) |
